

c-pro 3 micro+ and c-pro 3 kilo+

ENGLISH GETTING STARTED

1.1 Important

Read these instructions carefully before installing and using the controller and follow all additional information for installation and electrical connection; keep these instructions close to the controller for future consultations.

The controller must be disposed according to the local legislation about the collection for electrical and electronic equipment.

2.1 Introduction

c-pro 3 micro+ and c-pro 3 kilo+ are two families of programmable controllers.

The families are available in the version:
 • with 128 x 4 pixel single colour LCD graphic display (back with backlighting through white LED) and with 6 buttons (with preset functional keyboard made of silicone rubber integrated in the controller);
 hereinafter also called built-in LCD versions (not available in c-pro 3 micro+).

• with 4 + 4 digit custom display (with function keys) and with 6 buttons (with preset functions) keyboard made of silicone rubber integrated in the controller; hereinafter also called built-in LED versions.
 • with a Vgraph, Vtouch, Vroom or Vcolor hereinafter also called blind versions.
 The controllers have got:
 - real time clock
 - 9 analog inputs of which 6 configurable via configuration parameter for PTC /NTC / P1 1000 probes /0-20 mA /4-20 mA /0-5 V ratiometric / 0-10 V transducers and 3 configurable via configuration parameter for PTC /NTC / P1 1000 probes.
 - 9 optoisolated digital inputs at 24 VAC /DC of which 7 at 50 / 60 Hz and 2 up to 2 kHz.
 - 6 non optoisolated analog outputs of which 2 configurable via configuration parameter for PWM / 0-10 V signal, 2 configurable via configuration parameter for 0-20 mA / 4-20 mA / 0-10 V signal and 2 for 0-10 V signal
 - according to the model;
 - 9 digital outputs (electromechanical relays) of which seven 3 res. A @ 250 VAC SPST outputs and two 3 res. A @ 250 VAC SPDT outputs
 - 9 digital outputs of which seven 3 res. A @ 250 VAC SPST electromechanical relays and two solid state relays (24 VAC/DC, 0.6 A max) and seven 3 res. A @ 250 VAC SPST digital outputs (electromechanical relays) and an unipolar stepper electronic expansion valves driver
 - 4 non optoisolated communication ports of which 1 USB OTG port (for programming and debugging), 1 CAN port with CANbus communication protocol, 1 RS-485 port with Modbus master communication protocol and 1 RS-485 port with Modbus slave communication protocol.

Through the I/O expansion c-pro 3 EXP micro+ or c-pro 3 EXP kilo+ it is possible to increase the number of inputs and outputs.

Through the development environment LINPRO 3 (to order separately) it is possible to realize the application software and through the connecting cable 0810500020 (12 m, 6.56 ft long) or 0810500020 (0.5 m, 1.640 ft long), to order separately, it is possible to program the controller.

The devices look in case 4 DIN modules.
 Installation is in electrical panel, on DIN rail.
 Through a common USB peripheral it is possible to make the upload and the download of the configuration parameters.

For further information please consult the Hardware manual of c-pro 3.

3.1 Description

The devices look in case 4 DIN modules.
 Installation is in electrical panel, on DIN rail.
 Through a common USB peripheral it is possible to make the upload and the download of the configuration parameters.

For further information please consult the Hardware manual of c-pro 3.

The following table shows the meaning of the parts of the controller.

PART	MEANING
1	digital outputs 6 and 7
2	digital outputs 1... 5
3	according to the model: - digital output 9 - unipolar stepper electronic expansion valves driver
4	display and keyboard (not available in the blind versions)
5	analog inputs 7... 9, digital inputs 6... 9 and analog outputs 4... 6
6	analog inputs 1... 6, digital inputs 1... 5 and analog outputs 1... 3
7	USB OTG port
8	micro-switch to: - plug in the termination of the RS-485 port with Modbus slave communication protocol - plug in the termination of the CAN port - power supply, RS-485 port with Modbus slave communication protocol and CAN port
9	micro-switch to plug in the termination of the RS-485 port with Modbus master communication protocol
10	analog inputs 7... 9, digital inputs 6... 9 and analog outputs 4... 6
11	analog inputs 1... 6, digital inputs 1... 5 and analog outputs 1... 3
12	according to the model: - digital output 8 - unipolar stepper electronic expansion valves driver

4. SIZE AND INSTALLATION

4 DIN modules, size in mm (in).

4.1 Size

4 DIN modules, size in mm (in).

4.2 Installation

On DIN rail 35.0 x 7.5 mm (1.377 x 0.295 in) or 35.0 x 15.0 mm (1.377 x 0.590 in).

To install c-pro 3 micro+ and c-pro 3 kilo+ operate as shown in the following drawing.

To remove c-pro 3 micro+ and c-pro 3 kilo+ remove possible extractable screw terminal blocks plugged at the bottom first, then operate on the DIN rail clips with a screwdriver as shown in the following drawing.

To install c-pro 3 micro+ and c-pro 3 kilo+ again press the DIN rail clips to the end first.

To remove c-pro 3 micro+ and c-pro 3 kilo+ remove possible extractable screw terminal blocks plugged at the bottom first, then operate on the DIN rail clips with a screwdriver as shown in the following drawing.

To install c-pro 3 micro+ and c-pro 3 kilo+ again press the DIN rail clips to the end first.

To remove c-pro 3 micro+ and c-pro 3 kilo+ remove possible extractable screw terminal blocks plugged at the bottom first, then operate on the DIN rail clips with a screwdriver as shown in the following drawing.

To install c-pro 3 micro+ and c-pro 3 kilo+ again press the DIN rail clips to the end first.

To install c-pro 3 micro+ and c-pro 3 kilo+ again press the DIN rail clips to the end first.

4.3 Additional information for installation

- working conditions (working temperature, humidity, etc.) must be between the limits indicated in the technical data
- do not install the controller close to heating sources (heaters, hot air ducts, etc.), devices provided with big magnets (big speakers, etc.), locations subject to direct sunlight, rain, humidity, dust, mechanical vibrations or bumps
- according to the safety legislation, the protection against electrical parts must be ensured by a correct installation of the controller; the parts that ensure the protection must be installed so that you can not remove them if not by using a tool.

5. ELECTRICAL CONNECTION MODELS WITH 9 ELECTROMECHANICAL RELAYS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

5.1 Electrical connection models with 9 electromechanical relays

power supply, RS-485 port with Modbus slave communication protocol and CAN port

5.2 Electrical connection models with 7 electromechanical relays and 2 solid state relays

power supply, RS-485 port with Modbus slave communication protocol and CAN port

5.3 Electrical connection models with 7 electromechanical relays and unipolar stepper expansion valves driver

power supply, RS-485 port with Modbus slave communication protocol and CAN port

5.4 Meaning of connectors

The following table shows the meaning of the connectors.

DIGITAL OUTPUTS

TERM.	MEANING
NO6	normally open contact digital output 6
NO7	normally open contact digital output 7
CO6/7	common digital outputs 6 and 7

Digital outputs 1... 5 (electromechanical relays).

TERM.	MEANING
NO1	normally open contact digital output 1
NO2	normally open contact digital output 2
CO1/2	common digital outputs 1 and 2
NO3	normally open contact digital output 3
NO4	normally open contact digital output 4
NO5	normally open contact digital output 5
CO3/4/5	common digital outputs 3, 4 and 5

DIGITAL OUTPUTS

RS-485 port with Modbus master communication protocol (with network already polarized internally).

UNIPOLAR STEPPER EXPANSION VALVES DRIVER (IF PRESENT)

power supply, RS-485 port with Modbus slave communication protocol and CAN port

RS485 LT

power supply, RS-485 port with Modbus slave communication protocol and CAN port

ANALOG INPUTS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

ANALOG OUTPUTS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

DIGITAL INPUTS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

TECHNICAL DATA

power supply, RS-485 port with Modbus slave communication protocol and CAN port

CAN LT

power supply, RS-485 port with Modbus slave communication protocol and CAN port

RS485 LT

power supply, RS-485 port with Modbus slave communication protocol and CAN port

ANALOG INPUTS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

ANALOG OUTPUTS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

DIGITAL INPUTS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

SIGNALS

power supply, RS-485 port with Modbus slave communication protocol and CAN port

LEDS AT THE FRONT OF THE CONTROLLER

power supply, RS-485 port with Modbus slave communication protocol and CAN port

TECHNICAL DATA

power supply, RS-485 port with Modbus slave communication protocol and CAN port

INSTALLATION

power supply, RS-485 port with Modbus slave communication protocol and CAN port

ADDITIONAL INFORMATION FOR ELECTRICAL CONNECTION

power supply, RS-485 port with Modbus slave communication protocol and CAN port

Working temperature: from -10 to 60 °C (14 to 140 °F) for the built-in versions, from -20 to 60 °C (-4 to 140 °F) for the blind versions.
Working humidity: from 5 to 95% of relative humidity without condensation.

Pollution situation: 2

Power supply: 12 VAC, 50 / 60 Hz, 7 VA max., supplied from a class 2 circuit in **E-pro 3** micro, 24 VAC (+10 % -15 %), 50 / 60 Hz, 10 VA max. or 20...30 VDC, 5 W max. supplied from a class 2 circuit in **E-pro 3** micro. Insert the power supply with a fuse rated 25A 12.50 V.

Overvoltage category: II

Real time clock: incorporated (with SuperCap battery).

Real time clock data maintenance in absence of power supply: 3 days will battery fully charged.

Analog inputs: 9 analog inputs of which 6 configurable via configuration parameter for PTC / NTC / Pt 1000 probes / 0-20 mA / 4-20 mA / 0-5 V potentiometric / 0-10 V transducers and 3 configurable via configuration parameter for PTC / NTC / Pt 1000 probes.

Power supply 0-5 V potentiometric transducers: 5 VDC, 60 mA max. Power supply 0-20 mA / 4-20 mA / 0-10 V transducers: 12 VDC, 120 mA max.

The sum of the maximum current powerable by the two power supply circuits is 120 mA

Working range: from -50 to 150 °C (-58 to 302 °F) for PTC probe, from -50 to 120 °C (-58 to 248 °F) for NTC probe, from -100 to 400 °C (-148 to 752 °F) for Pt 1000 probe.

Digital inputs: 9 optoisolated digital inputs at 24 VAC / DC, of which 7 at 50 / 60 Hz and 2 up to 2 KHz.

Resolution: 0.1 °C for PTC / NTC probes, 0.1 °C for Pt 1000 probes, 0.01 mA for 0-20 mA, 4-20 mA transducers, 0.01 V for 0-10 V transducers.

Analog outputs: 6 non optoisolated outputs:

- 2 outputs configurable via configuration parameter for PWM / 0-10 V signal

- 2 outputs configurable via configuration parameter for 0-20 mA / 4-20 mA / 0-10 V signal

Digital outputs: according to the model:

- 9 outputs (electromechanical relays) of which seven 3 res. A @ 250 VAC SPDT outputs (K1... K7) and two 3 res. A @ 250 VAC SPDT outputs (K8 and K9)

- 9 outputs of which seven 3 res. A @ 250 VAC SPST electromechanical relays (K1... K7) and two 24 VAC / DC, 0.6 A max. solid state relays (K8 and K9)

- seven 3 res. A @ 250 VAC SPST outputs (electromechanical relays, K1... K7) and an unipolar stepper electronic expansion valves driver.

Unipolar stepper electronic expansion valves driver: 12 VDC, 260 mA max.

Type of actions and additional features: 18

Communication ports: 4 non optoisolated ports:

- 1 USB OTS port (for programming and debugging)

- 1 CAN port with CANbus communication protocol

- 2 RS-485 ports of which 1 with Modbus master communication protocol and 1 with Modbus slave communication protocol.

- CPU: 120 MHz (168 MHz in the IoT version)

- RAM: 196 KB (256 KB in the IoT version)

- Programmability: 512 KB (1 MB in the IoT version)

- External FLASH: 2 MB (2 MB in the IoT version)

Lo schermo deve essere compreso, alla massima velocità, solo in un punto.

- alimentazione trasduttori: 100 m (328 ft)
- ingressi digitali: 100 m (328 ft)
- uscita analogica di tipo PWM: 1 m (3,280 ft)
- uscite analogiche di tipo 0-20 mA / 4-20 mA / 0-10 V / 100 m (328 ft)
- uscite digitali (rete elettromeccanica): 100 m (328 ft)
- uscite digitali (rete allo stato solido): 100 m (328 ft)
- driver per valvole di espansione elettroniche di tipo stepper unipolare: 3 m (9,842 ft)
- porta RS-485: 1.000 m (3.280 ft); si veda anche il *Manuale Modbus Specifications and Implementation guides*
- porta CAN:
 - 1.000 m (3.280 ft) con baud rate: 20.000 baud
 - 500 m (1.640 ft) con baud rate: 50.000 baud
 - 250 m (820 ft) con baud rate: 125.000 baud
 - 50 m (164 ft) con baud rate: 500.000 baud.

Si consiglia di utilizzare il kit di cablaggio CAV18 (monostere a vite estraibile femmina passo 5,0 mm, 0,196 in; da ordinare separatamente), il kit di cablaggio CAV19 (connettori Micro-Fit femmina cablati per **C-pro 3 micro**, da ordinare separatamente) e il kit di cablaggio CAV20 (monostere a molle estraibile femmina passo 3,5 mm, 0,137 in; per **C-pro 3** *Micro*, da ordinare separatamente).

Per programmare il controller si consiglia di utilizzare il cavo di connessione 0810500018 (di lunghezza 2 m, 6,561 ft) o 0810500020 (di lunghezza 0,5 m, 1,640 ft), da ordinare separatamente.

Temperatura di impiego: da -10 a 60 °C (da 14 a 140 °F) per le versioni built-in, da -20 a 60 °C (da -4 a 140 °F) per le versioni cassetta.

Umidità di impiego: dati 10 al 95% di umidità relativa senza condensazione.

Situazione di inquinamento:

Alimentazione: 12 VDC, 50/60 Hz, 7 VA max., fornita da un circuito classe 2 in **C-pro 3 micro**; 24 VAC (+10 % -15 %), 50 / 60 Hz, 10 VA max. o 20...30 VDC, 5 W max. fornita da un circuito classe 2 in **C-pro 3 Micro**. Proteggere l'alimentazione con un fusibile da 2A a 250 V.

Categoria di sovratensione:

Orologio: incorporato (con batteria SuperCap).

Mantenimento dati dell'orologio in assenza di alimentazione:

ne: 3 giorni con batteria carica.

Ingressi analogici: 9 ingressi, di cui 6 configurabili via parametro di configurazione per sonde PTC/NTC/Pt 1000 / trasduttori 0-20 mA / 4-20 mA / 0-5 V razzometrici / 0-10 V e 3 configurabili via parametro di configurazione per sonde PTC / NTC / Pt 1000.

Alimentazione trasduttori razzometrici 0-5 V: 5 VDC, 60 mA max.

Alimentazione trasduttori 0-20 mA, 4-20 mA / 0-10 V: 12 VDC, 120 mA max.

La somma delle massime correnti fornibili dai due circuiti di alimentazione è di 120 mA.

Campo di misura: da -50 a 150 °C (da -58 a 302 °F) per sonda PTC da -50 a 120 °C (da -58 a 248 °F) per sonda NTC, da -100 a 400 °C (da -148 a 752 °F) per sonda Pt 1000.

Ingressi digitali: 9 ingressi optoisolati a 24 VAC / DC di cui 2 fino a 2 kHz e 7 a 50 / 60 Hz.

Risoluzione: 0,1 °C per sonde PTC / NTC, 0,1 °C per sonde Pt 1000, 0,001 mA per trasduttori 0-20 mA / 4-20 mA, 0,01 V per trasduttori 0-5 V.

Uscite analogiche: 6 uscite non optoisolate.

• 2 uscite configurabili via parametro di configurazione per segnale di tipo PWM / 0-10 V

• 2 uscite configurabili via parametro di configurazione per segnale di tipo 0-20 mA / 4-20 mA / 0-10 V

• 2 uscite per segnale di tipo 0-10 V.

Uscite digitali: a seconda del modello:

- 9 uscite (rete elettromeccanica) di cui 7 da 3 A res. @ 250 VAC di tipo SPST (K1...K7) e 2 da 3 A res. @ 250 VAC di tipo SPDT (K8 e K9)
- 9 uscite di cui 7 rete elettromeccanica da 3 A res. @ 250 VAC di tipo SPST e 2 rete allo stato solido da 24 VAC/DC, 0,6 A max. (K8 e K9)
- 7 uscite (rete elettromeccanica) da 3 A res. @ 250 VAC di tipo SPST (K1...K7) e un driver per valvole di espansione elettroniche di tipo stepper unipolare.

Driver per valvole di espansione elettroniche di tipo stepper unipolare: 12 VDC, 260 mA max.

Tipologia di azioni e caratteristiche complementari: 1 B.

Porte di comunicazione: 4 porte non optoisolate:

- 1 porta USB OTG (per la programmazione e il debug)
- 1 porta CAN con protocollo di comunicazione CANbus
- 2 porte RS-485 di cui 1 con protocollo di comunicazione Modbus master e 1 con protocollo di comunicazione Modbus slave.

• CPU: 120 MHz (168 MHz nelle versioni IoT)

• RAM: 196 kB (256 kB nelle versioni IoT)

• Memoria programma: 512 kB (1 MB nelle versioni IoT)

• FLASH esterna: 2 MB (2 MB nelle versioni IoT).
