3.2	Control module dimensions	290.0 (11.417)	₽
The dime	nsions are expressed in mm (in); installation is envisioned on a	a flat surface using spacers.	
			 3.3 Recommendations for installation make sure that the work conditions (temperature of use, humidity,
			etc.) lie within the limits indicated in the technical data
			 do not install the instrument in proximity of heat sources (heaters, hot air pipes etc.) appliances with strong magnets (large diffusers
			etc.), places subject to direct sunlight, rain, humidity, excessive dust, mechanical vibrations or shocks
			• any metal parts in proximity of the control module must be at a
		0 (4.251)	distance such as not to compromise the safety distances • make sure the display is perfectly adherent to the methacrylate
			 in compliance with Safety Standards, the protection against any
			contact with the electric parts must be ensured via correct installation of the instrument. All parts that ensure protection must be fixed in a
			way such that they cannot be removed without the aid of a tool.

	ote mode.	 press and release the key. 	 make sure that the keyboard is not locked, that no procedure is in progress and defrosting is not in progress along with dripping or
		If the evaporator probe is absent (parameter P3 = 0), the " Pb2 " label will not be displayed.	evaporator fan standstill. • hold the (), key down for 4 s: the Overcooling LED will switch-on.
			The arc (*) Ney down for 4 s. the Overcooling LED will switchen.

Evco S.p.A. • Code 104F215E20 • page 2/8

During the Overcooling function, the work set-point is decreased from the temperature established by parameter r5; the function will last for the time established by parameter r6.

Defrosting is never activated during the Overcooling function; if the defrosting interval expires when the function is in progress, defrosting will be activated on conclusion of the function.

Activation of defrosting in manual mode 4.7

• make sure that the keyboard is not locked, that no procedure is in progress and the Overcooling function is not in progress hold the () key down for 4 s.

If the function of the evaporator probe is that of defrosting probe (parameter P3 = 1) and on activation of defrosting the temperature of the evaporator is above that established with parameter d2, defrosting will not be activated.

4.8 Functioning due to low or high relative humidity percentage (only if parameter F0 is set at 5)

During functioning due to low relative humidity percentage, the evaporator fan will be switched-on if the compressor is on and is switched-on cyclically if the compressor is off (parameter F4 establishes the duration of evaporator fan switch-off and parameter $\mathsf{F5}$ that regarding switch-on)

During functioning due to the high relative humidity percentage, the evaporator fan is always on

- Activation of the functioning due to low or high 4.8.1 relative humidity percentage (only if parameter FO is set at 5)
- make sure that the keyboard is not locked and that no procedure is in progress
- press and hold the and key for 4 s: the display will show "rhL" (functioning due to low relative humidity percentage) or "rhH" (functioning due to high relative humidity percentage) for 10 s.

To restore normal display in advance:

press a key.

It is also possible to activate functioning due to low or high relative humidity percentage using parameter F6.

If parameter F0 is not set at 5, pressing the and (a) key will cause the "---" indication to be displayed for 1 s

4.8.2 Learning of the type of functioning in progress (due to low or high relative humidity percentage only if parameter F0 is set at 5)

make sure no procedure is in progress

 \bullet press and release the B key and the B key: the display will show "rhL" (functioning due to low relative humidity percentage) or "rhH" (functioning due to high relative humidity percentage) for 10 s.

To restore normal display in advance:

press a key.

If parameter F0 is not set at 5, pressing the (a) and (k) key will cause: • the display of the "----" indication for 1 s if the keyboard is not locked • the display of the "Loc" label for 1 s if the keyboard is locked.

Switch-on/off of the cabinet light in manual mode 4.9 (only if parameter u1 and/or parameter u11 is set at 0)

make sure no procedure is in progress

 press and release the key: the light LED will switch-on/off. Using the door micro switch input, the cabinet light can also be switched-on/off in remote mode; see also parameter u2.

If parameter u1 is set at 0 (i.e. the utility managed by the fourth output is the cabinet light) and parameter u11 is set at 2 (i.e. the utility managed by the fifth output is the auxiliary output), holding the $\textcircled{\ensuremath{\mathfrak{O}}}$ key down for 2 s will cause the switch-on/off of the multipurpose LED and of the auxiliary output.

4.10 Switch-on of the demisting heaters (only if parameter u1 and/or parameter u11 is set at 1)

- make sure that the instrument is on and that no procedure is in progress
- hold the () key down for 2 s: the multipurpose LED will switch-on and the heaters will be switched on, both for the time established with parameter u6

The demisting heaters cannot be switched off in manual mode (i.e. before the time established with parameter u6 has passed)

4.11 Switch-on/off of the auxiliary output in manual mode (only if parameter u1 and/or parameter u11 is set at 2)

make sure that the keyboard is not locked and that no procedure is in progress

press and release the () key.

The multipurpose input can also be used to switch the auxiliary output on/off in remote mode.

If parameter u1 is set at 2 (i.e. the utility managed by the fourth output is the auxiliary output) and parameter u11 is set at 0 (i.e. the utility managed by the fifth output is the cabinet light), holding the () key down for 2 s will cause the switch-on/off of the cabinet light LED and of the cabinet light.

If the auxiliary output has been switched on in manual mode, sit can only be switched off in the same way (also, if the auxiliary output has been switched off in remote mode, it can only be switched off in the same way); see also parameter u2.

4.12 Energy Saving

During the Energy Saving function, the work set-point is increased of the temperature established with parameter r4 and the evaporator fan is switched on cyclically, on condition that the parameter F0 is set at 1 or 2 (parameter F13 establishes the duration of fan switch-off and parameter F14 that regarding switch-on).

When the time established with parameter i10 has passed without activation of the door micro switch (after the cabinet temperature has reached the work set-point) the Energy Saving function is activated automatically (until the input is activated again).

4.12.1 Activation/deactivation of the Energy Saving function with effect only on the compressor

The multipurpose input can also be used to switch the Energy Saving function on/off in remote mode.

The Energy Saving function can also be activated in real time at the time established using parameter HE1. In this case, the function will last for the time established with parameter HE2.

Lock/unlock of the keyboard 4.13

To lock the keyboard:

- make sure no procedure is in progress
- for 1 s
- If the keyboard is locked, the following is not allowed:
- to switch the instrument on/off in manual mode
- to display the evaporator temperature (with the procedure indicated
- in paragraph 4.4) • to display the condenser temperature (with the procedure indicated
- in paragraph 4.5)
- activated/deactivate the Overcooling function
- activate defrosting in manual mode . to activate functioning due to high or low relative humidity percentage and to learn the type of functioning
- to switch the auxiliary output on/off in manual mode
- to display the information regarding the HACCP alarms
- to delete the list of HACCP alarms
- . to modify the date and time
- to modify the work set-point (with the procedure indicated in paragraph 5.2)
- to display the compressor functioning hours

• to cancel the compressor functioning hours.

These operations cause the "Loc" label to be displayed for 1 s. To unlock the keyboard:

 \bullet press and hold the $\textcircled{\textcircled{B}}$ and O key for 1 s: the display will show "**UnL**" for 1 s.

4.14 Silencing the buzzer

• make sure no procedure is in progress

• press a key (the first time the key is pressed does not cause the associated effect).

If parameter u1 and/or parameter u11 is set at 3 and parameter u4 is set at 1, pressing the key will also cause the alarm output to be deactivated.

If parameter u9 is set at 0, the buzzer will not be enabled.

SETTINGS

5.1 Setting the day and real time

- . make sure that the keyboard is not locked and that no procedure is in progress
- \bullet hold the $\textcircled{\textcircled{B}}$ key down for 1 s: the display will show the first label available
- press and release the $(\begin{smallmatrix} {\bf k}) {\bf k}$ key or the $(\begin{smallmatrix} {\bf m}) {\bf k}$ key to select "**rtc**" To modify the year.
- ${\scriptstyle \bullet}$ press and release the $\textcircled{\ensuremath{\mathfrak{B}}}$ key: the display will show " ${\it yy}$ " followed by the last two numbers of the year and the clock LED will flash
- press and release the (b) key or the (b) key within 15 s.
- To modify the month:
- ${\scriptstyle \bullet}$ press and release the $\textcircled{\ensuremath{\mathfrak{E}}}$ key during modification of the year: the display will show "nn" followed by the two numbers of the month • press and release the (k) key or the (k) key within 15 s. To modify the day of the month:
- ${\scriptstyle \bullet}$ press and release the $\textcircled{\ensuremath{\mathfrak{E}}}$ key during modification of the month: the display will show "dd" followed by the two numbers of the day • press and release the $\binom{\mathbb{P}}{\mathbb{A}}$ key or the $\binom{\mathbb{P}}{\mathbb{V}}$ key within 15 s.
- To modify the time:
- ${\scriptstyle \bullet}$ press and release the $(\textcircled{\ensuremath{\mathfrak{B}}})$ key during modification of the day of the month: the display will show "hh" followed by the two numbers of the hour
- press and release the $\binom{\mathbb{P}}{\mathbb{A}}$ key or the $\binom{\mathbb{P}}{\mathbb{V}}$ key within 15 s.

The time is displayed in the 24 h format.

To modify the minutes:

 ${\scriptstyle \bullet}$ press and release the (a) key during modification of the hour the display will show "nn" followed by the two numbers of the minutes

- press and release the $(\frac{1}{5})$ key or the $(\frac{1}{9})$ key within 15 s. press and release the key or do not operate for 15 s the clock LED will switch-off.
- To exit the procedure:

• press and release the (\overline{k}) key or the (\overline{m}) key until the display shows the

cabinet temperature or do not operate for 60 s. Alternatively:

press and release the (0) key.

5.2 Setting the work set-point

- make sure that the keyboard is not locked and that no procedure is in progress
- $\scriptstyle \bullet$ press and release the $\textcircled{\ensuremath{\mathfrak{B}}}$ key: the compressor LED will flash
- press and release the $\bar{(k)}$ key or the \oplus key within 15 s; see also parameters r1, r2 and r3
- \bullet press and release the $\textcircled{\ensuremath{\mathfrak{O}}}$ key or do not operate for 15 s the compressor LED will switch-off, after which the instrument will exit the procedure. To exit the procedure in advance:
- do not operate for 15 s (any modifications will be saved).
- It is also possible to set the work set-point via parameter SP.

5.3 Setting the configuration parameters

To access the procedure make sure no procedure is in progress

To select a parameter:

To modify a parameter:

n30	the alarm occurred at 16 and 30		
dur	the display is about to show the duration of the alarm		
h01	the alarm had duration of 1 h (continues)		
n15	the alarm had duration of 1 h and 15 min		
AH3	the alarm selected		

The display shows each piece of information for 1 s.

To exit the succession of information:

 \bullet press and release the 0 key: the display will show the alarm selected (in the example "AH3")

To exit the procedure:

- exit the succession of information
- press and release the (\mathbb{B}_{A}) key or the (\mathbb{B}) key until the display shows the cabinet temperature or do not operate for 60 s.
- Alternatively:

• exit the succession of information

- press and release the 🔘 key
- If the instrument has no alarm in the memory, the "LS" label will not be displayed.

6.3 Deletion of the list of HACCP alarms

- make sure that the keyboard is not locked and that no procedure is in progress
- \bullet hold the $\textcircled{\textcircled{B}}$ key down for 1 s: the display will show the first label available
- press and release the $(k_{\mathbb{A}})$ key or the $(k_{\mathbb{A}})$ key to select "**rLS**"
- press and release the key or the key within 15 s. to set "149" press and release the) key or do not operate for 15 s the display
- will show flashing "----" for 4 s. and the HACCP LED will switch-off, after which the instrument will exit the procedure. If the instrument has no alarm in the memory, the "rLS" label will not
- be displayed 7 COUNTING THE COMPRESSOR FUNCTIONING HOURS

7.1 **Preliminary considerations** The instrument can memorise up to 9.999 compressor functioning hours, after which the number "9999" flashes.

7.2 Display of the compressor functioning hours

• make sure that the keyboard is not locked and that no procedure is

- in proaress \bullet hold the $_{\scriptsize{\tiny (\underline{w})}}$ key down for 1 s: the display will show the first label available
- press and release the $(\begin{tabular}{c} \mathbb{B} \\ \mathbb{A} \end{tabular}$ key or the $(\begin{tabular}{c} \mathbb{B} \\ \mathbb{V} \end{tabular}$ key to select "CH"

To exit the procedure:

 \bullet press and release the $\textcircled{\textcircled{\sc end}{\sc end}}$ key or do not operate for 60 s

• press and release the $\widetilde{(\frac{k}{\Delta})}$ key or the $(\overline{\texttt{P}})$ key until the display shows the cabinet temperature or do not operate for 60 s.

Alternatively: press and release the () key.

7.3 Deletion of the compressor functioning hours

• make sure that the keyboard is not locked and that no procedure is in progress

- \bullet hold the $(\underline{\textcircled{W}})$ key down for 1 s: the display will show the first label available
- press and release the (\underline{k}) key or the $(\underline{\emptyset})$ key to select "**rCH**"

SIGNALS AND INDICATIONS

• press and release the $\underbrace{\textcircled{o}}$ key

8

- press and release the () key or the () key within 15 s. to set "149" press and release the () key or do not operate for 15 s the display
- will show flashing "----" for 4 s, after which the instrument will exit the procedure

8.1 Signals LED MEANING * compressor LED if on, the compressor will be on if flashing: • the work set-point modification will be in progress (with the procedure indicated in paragraph 5.2)

• check the temperature associated to the alarm

• if parameter A0 is seta at 0, the instrument memorises the

the alarm output will be activated (only if parameter u)

see parameters A0, A1 and A2

and/or parameter u11 is set at 3)

Main consequences:

• dripping will be in progress:

АН Maximum temperature alarm (HACCP alarm) Solutions: verify the temperature of the cabinet see: parameters A4 and A5 Main consequences: the instrument memorises the alarm • the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 3) id Door micro switch input alarm (HACCP alarm) Solutions: check the causes that brought about the activation of the input see parameters i0, i1 and i4 Main consequences: the effect established with parameter i0 • if parameter i4 is set at 1, the instrument memorises the alarm, on condition that parameter i2 is not set at -1 the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 3) PF Power apply cut-off alarm (HACCP alarm) Solutions: check the causes of the power cut see parameters A10 and A12 press a key to restore normal display Main consequences: • if the duration of the power supply cut-off is longer than the time established with parameter A10, the instrument will memorise the alarm • the alarm output will be activated (only if parameter u1 and/or parameter u11 is set at 3) iA Multipurpose input alarm Solutions • check the causes that brought about the activation of the input see parameters i5 and i6 Main consequences the effect established with parameter i5 the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 3) iSd Pressure switch alarm Solutions: check the causes that brought about the activation of the input see parameters i5, i6, i7, i8 and i9 switch the instrument off and back on again or cut the power supply off Main consequences: the regulators will be switched off • the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 31 СОН Overheated condenser alarm Solutions: · verify the temperature of the condenser see parameter C6 Main consequences: the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 31 if parameter u1 and/or parameter u11 is set at 6, the condenser fan will be on CSd Blocked compressor alarm Solutions: verify the temperature of the condenser • see parameter C7 switch the instrument off and back on again: when the instrument is switched back on, if the condenser temperature is still above that established with parameter C7, the power supply must be disconnected and the condenser cleaned. Main consequences: • the evaporator compressor and fan will be switched off • the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 3) dFd Defrosting concluded due to maximum duration alarm Solutions - check the integrity of the evaporator probe see parameters d2, d3 and d11 press a key to restore normal display Main consequences: • the instrument continues to function regularly When the cause of the alarm has disappeared, the instrument will go back to normal functioning, except for the following alarms: • the power supply cut-off alarm ("PF" code), which requires a key to be pressed • the pressure switch alarm ("iSd" code), which requires the instrument to be switched off or the power supply to be cut-off the compressor blocked due to condenser temperature alarm ("CSd") code), which requires the instrument to be switched off or the power supply to be cut-off • the defrosting concluded due to maximum duration alarm ("dFd" code), which requires a key to be pressed.

ERRORS Battery charging time: 2 min without interruptions (the battery is 10.1 charged by the instrument power supply). Errors CODE MEANING Alarm buzzer: incorporated (in the user interface). Pr1 Measurement inputs: 3 (cabinet probe, evaporator probe and Cabinet probe error Solutions condenser probe) for NTC probes check that the probe is the NTC type Digital inputs: 2 (door micro switch and multipurpose) for normally check the integrity of the probe open/normally closed contact (potential free contact, 5 V 1 mA). Range of measurement: from -40 to 105 °C (from 40 to 220 °F). check the instrument-probe connection verify the temperature of the cabinet Resolution: 0.1 °C/1 °C/1 °F. Main consequences: Digital outputs: 4 relays: - compressor relay: 30 A res. @ 250 VCA (NO the activity of the compressor will depend on parameters C4 and C5 contact) defrosting will never be activated - defrosting relay: 16 A res. @ 250 VCA (contact • the alarm output will be activated (only if parameter u1 in exchange • evaporator fan relay: 8 A res. @ 250 VCA (NO and/or parameter u11 is set at 3) the door heaters will be switched-off (only if parameter u) contact) and/or parameter u11 is set at 4) fourth output relay: 16 A res. @ 250 VCA INO the evaporator valve will be deactivated (only if contact)) parameter u1 and/or parameter u11 is set at 5) • fifth output relay: 8 A res. @ 250 VCA (contact in exchange). Pr2 Evaporator probe error Solutions The maximum current allowed on the loads is 20 A. . the same as the previous case but relative to the evaporator Serial port: port for communication with the Parameters Manager probe set-up software system or to the monitoring and supervision system of Main consequences: RICS plants (via TTL, with MODBUS communication protocol) or with • if parameter P3 is set at 1, defrosting will last for the time the EVKEY programming key established with parameter d3 • if parameter P3 is set at 1 and parameter d8 is set at 2 or 3, the instrument will function as if parameter d8 is set at 0 if parameter F0 is set at 3 or 4, the instrument will function as if parameter is set at 2 • the alarm output will be activated (only if parameter u1 and/or parameter u11 is set at 3) Pr3 Condenser probe erro Solutions • the same as the previous case but relative to the condenser probe Main consequences • the overheated condenser alarm ("COH" code) will never be activated • the compressor blocked due to condenser temperature alarm ("CSd" code) will never be activated • the alarm output will be activated (only if parameter u1 and/or parameter u11 is set at 3) • if parameter u1 and/or parameter u11 is set at 6, the condenser fan will function in parallel to the compressor rtc Clock error Solutions set the day and real time again Main consequences: • if parameter d8 is set at 4, the instrument will function as if parameter is set at 0 the HACCP function will not supply information relative to the date and time the alarm occurred • the Energy Saving function will not be available in real time the alarm output will be activated (only if parameter u) and/or parameter u11 is set at 3) ErC Error of compatibility user interface-control module Solutions: check the compatibility user interface-control module (check the data related in the labels) Main consequences: • the control module will keep working correctly ErL Error of communication user interface-control module Solutions - check the connection user interface-control module Main consequences: • the control module will keep working correctly When the cause of the alarm disappears, the instrument restores normal functioning, except for the clock error ("rtc" code) that requires setting of the day and real time TECHNICAL DATA 11 11.1 Technical data User interface container: open frame board behind a methacrylate sheet Control module container: open frame board. User interface protection rating (front): IP 65. Control module protection rating: IP 00. User interface connections: screw terminal board (at the control module) The user interface connects to the control module via a 4-way cable: the maximum length allowed for the connection cable is 20 m (65.614 ft; the cable is not supplied with the instrument). Control module connections: 6.3 mm faston (0.248 in, power supply and outputs), screw terminal board (to the user interface and inputs), 6-pole connector (serial port). Temperature of use: from 0 to 55 °C (from 32 to 131 °F, 10 ... 90%

т = 27/15

charged.

control module

relative humidity without condensate).

User interface power supply: the user interface is powered by the

Control module power supply: 115 ... 230 VCA, 50/60 Hz, 10 VA.

Maintaining the clock data in a power cut: 24 h with battery

PARAN E9	M.MIN.	MAX.	U.O.M.	DEF.	RESERVED reserved
		of measu	rement dep		aranter P2

(1) the unit of measurement depends on parameter P2
 (2) appropriately set the parameters relative to the regulators after modification of parameter P2

Evco S.p.A. • Code 104F215E20 • page 8/8

- (3) the parameter only has effect after a power cut that occurs when the instrument is on
- (4) the time established with the parameter is counted also when the instrument is off
- (5) if parameter C1 is set at 0, the delay from the conclusion of the cabinet probe error will be 2 min
- (6) the parameter differential is 2.0 °C/4 °F
- (7) on instrument switch-on, the temperature of the condenser is already above that established with parameter C7, parameter C8 will have no effect
- (8) the instrument memorises the defrosting interval count every 30 min. The modification of parameter d0 has effect from the conclusion of the previous defrosting interval or from the activation of defrosting in manual mode
- (9) the display restores normal functioning when, on conclusion of evaporator fan standstill, the cabinet temperature drops below that which has blocked the display (or if a temperature alarm occurs)
- (10) if parameter P3 is set at 0 or 2, the instrument will function as if parameter d8 is set at 0
- (11) if, on activation of defrosting, the switch-on duration of the compressor is less than the time established with parameter d15, the compressor will remain on for the fraction of time required to complete it
- (12) if parameter P3 is set at 0, the instrument will function as if parameter A0 is set at 0 but will not memorise the alarm
- (13) during defrosting, dripping and evaporator fan standstill, the temperature alarms are not present as long as these have occurred after activation of defrosting
- (14) during the activation of the door micro switch input, the maximum temperature alarm is absent on the condition that these occur after activation of the input
- $\left(15\right)$ the alarm is always signalled when the power supply is restored
- (16) if parameter P3 is set at 0, the instrument will function as if parameter F0 is set at 2
- (17) the parameter is also modified by operating with the procedure given in paragraph 4.8.1
- $(18)\,$ if parameter P4 is set at 0, the condenser fan will function in parallel to the compressor
- (19) the compressor is switched-off after 10 s from activation of the input. If the input is activated during defrosting or standstill of the evaporator fan, the activation will not have any effect on the compressor
- (20) the instrument memorises the alarm on expiry of the time established with parameter i2. If parameter i2 is set at -1, the instrument does not memorise the alarm
- (21) make sure that the time established with parameter i7 is lower than that established with parameter i9 $\,$
- (22) to prevent damage to the utility connected, modify the parameter when the instrument is off
- (23) if parameter u2 is set at 0, instrument switch-off will cause the cabinet light and/or auxiliary output to switch off (on successive switch-on of the instrument, the utility will remain off); if the parameter u2 is set at 1, instrument switch-off will not cause the cabinet light and/or auxiliary output to switch off (on successive switch-on of the instrument, the utility will remain on).

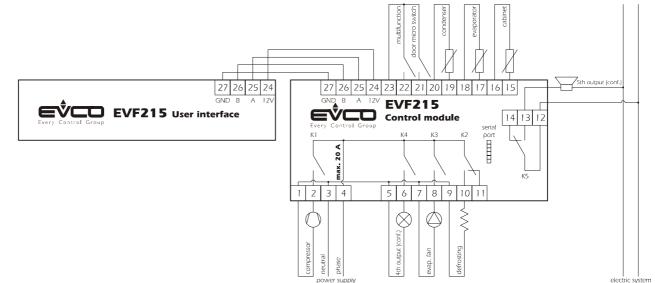

13 ELECTRIC CONNECTION

13.1 Preliminary considerations

With reference to the wiring diagram:

- the utility managed by the fourth output will depend on parameter u1
- the utility managed by the fifth output will depend on parameter u11
- the serial is the port for communication with the Parameters Manager set-up software system or to the monitoring and supervision system of RICS plants (through a serial interface, via TTL, with MODBUS communication protocol) or with the EVKEY programming key. The port must not be used simultaneously for three purposes.

13.2 Electric connection

13.3 Recommendations for the electric connection

· do not operate on the terminal boards using electric or pneumatic screwdrivers

- if the instrument has been taken from a old place to a hot one, the humidity could condense inside. Wait about one hour before applying power
- make sure that the power supply voltage, frequency and operational electric power correspond to those of the local power supply
- disconnect the power supply before performing any type of maintenance
- do not use the instrument as a safety device
- for repairs and information regarding the instrument, contact the Evco sales network.
