EVS233 Digital controller for static refrigerating units, with HACCP and Energy Saving functions

1.1 Important

Read these instructions carefully before installing and using the instrument and follow all additional information for installation and electrical connection: keep these instructions close to the instrument for future consultations.

1.2 Installing the instrument

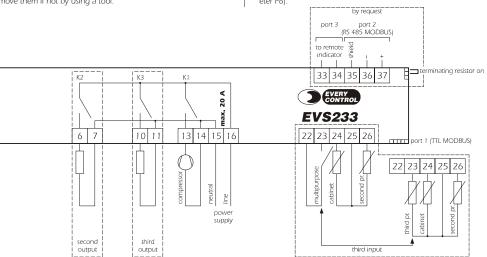

DIMENS.	MINIMUM	TYPICAL	MAXIMUM
А	150.0 (5.905)	150.0 (5.905)	150.5 (5.925)
В	31.0 (1.220)	31.0 (1.220)	31.5 (1.240)
C	164.0 (6.456)	165.0 (6.496)	166.0 (6.535)

Additional information for installation • moderate the clamping torque of the screws, in order not to damage

- working conditions (working temperature, humidity, etc.) must be be-
- tween the limits indicated in the technical data do not install the instrument close to heating sources (resistances, hot air ducts, etc.), devices provided with big magnetos (big speakers, etc.), locations subject to direct sunlight, rain, humidity, dust, mechani-
- according to the safety norms, the protection against electrical parts must be ensured by a correct installation of the instrument; the parts that ensure the protection must be installed so that you can not remove them if not by using a tool.

1.3 Wiring diagram

- With reference to the options in the outlines:
- the operation of the second probe depends on parameter P3
- the operation of the third input depends on parameter P4
- the user managed by the second output depends on parameter u0
- the user managed by the third output depends on parameter u1
- port 1 is the serial port for the communication with the supervision system (through a serial interface) or with the programming key (via TTL, with MODBUS communication protocol); the port must not be
- used at the same time for the same purposes port 2 is the serial port for the communication with the supervision system (via RS 485, with MODBUS communication protocol; by request); port 2 must not be used at the same time to the same purpose
- port 3 is the port for the communication with the remote indicator (by request; the indicator shows the quantity you have set with param-

- do not operate on the terminal blocks with electrical or pneumation screwers
- if the instrument has been moved from a cold location to a warm one, the humidity could condense on the inside: wait about an hour before supplying it
- test the working power supply voltage, working electrical frequency and working electrical power of the instrument; they must correspond
- disconnect the local power supply before servicing the instrument • do not use the instrument as safety device
- for repairs and information on the instrument please contact Evco sales network.

2 USER INTERFACE

with the local power supply

2.1 Turning on/off the instrument by hand

- make sure the keyboard is not locked and no procedure is running ■ press (**((()**) 2 s.
- If the instrument is turned off, the regulators will be turned off; the possibility to turn on/off the cabinet light or the auxiliary output when the instrument is turned off depends on parameter u2

Turning off means turning off the instrument via software (the instrument remains connected with the power supply

Through the multipurpose input it is also possible to turn on/off the instrument at a distance.

2.2 The display

If the instrument is turned on, during the normal operation the display will show the quantity you have set with parameter P5:

- \bullet if P5 = 0, the display will show the cabinet temperature
- if P5 = 1, the display will show the working setpoint
- if P5 = 2, the display will show the temperature read by the second
- if P5 = 3, the display will show "cabinet temperature temperature read by the second probe"
- if P5 = 4, the display will show the temperature read by the third probe (only if parameter P4 has value 1 or 2).

If the instrument is turned off, the display will be switched off.

2.3 Showing the cabinet temperature

- make sure the keyboard is not locked and no procedure is running press (2) 2 s: the display will show the first available label
- press or 🕏 to select "Pb1"
- press (80%)

To quit the procedure

- press (80%) or do not operate 15 s
- press or do not operate 60 s.

If during the normal operation the display shows the cabinet tempera-

ture (parameter P5 = 0), the label "Pb1" will not be shown.

- 2.4 Showing the temperature read by the second probe
- make sure the keyboard is not locked and no procedure is running • press (2) 2 s: the display will show the first available label
- press or to select "Pb2"
- press (@@)
- To auit the procedure
- press (996) or do not operate 15 s
- press (♠) or do not operate 60 s.
- If the second probe is not enabled (parameter P3 = 0), the label "**Pb2**"

2.5 Showing the temperature read by the third probe (only if parameter P4 has value 1 or 2)

- make sure the keyboard is not locked and no procedure is running press 2 s: the display will show the first available label
- press 🙀 or 📞 to select "**Pb3**"
- To guit the procedure
- press (80%) or do not operate 15 s
- press (or do not operate 60 s.

If the function of the third input is not the one of third probe (paramete P4 = 0 or 3), the label "Pb3" will not be shown.

2.6 Activating the defrost by hand

• make sure the keyboard is not locked, no procedure is running and function Overcooling is not running

If the function of the second probe is the one of defrost probe (parameter P3 = 1) and to the defrost activation the evaporator temperature is above the one you have set with parameter d2, the defrost will not be

2.7 Turning on/off the on-off output (only if parameter u0 has value 0)

If the instrument is turned on, the on-off output will be turned on: If the instrument is turned off, the on-off output will be turned off.

2.8 Turning on/off the cabinet light by hand (only if parameter u1 has value 0)

- make sure no procedure is running
- press (※)

Through the multipurpose input it is also possible to turn off the cabin light at a distance; also look at parameter u2.

2.9 Turning on the demisting resistances by hand (only parameter u1 has value 1)

- make sure no procedure is running
- press 🙀 2 s: the resistances will be turned on the time you will have set with parameter b1
- It is not allowed to turn off the demisting resistances by hand.

Turning on/off the auxiliary output by hand (only if parameter u1 has value 2)

- make sure the keyboard is not locked and no procedure is running ■ press (※)
- Through the multipurpose input it is also possible to turn on/off the auxiliary output at a distance
- If the auxiliary output has been turned on by hand, it will be allowed to turn it off only in the same way (analogous matter if the auxiliary output has been turned on at a distance); also look at parameter u2.

Activating/deactivating function Overcooling

(quick cooling) make sure the keyboard is not locked, no procedure is running and

- the defrost or the dripping are not running
- press (37) 4 s: the working setpoint will be increased of the temperature you will have set with parameter r5 (the time you will have set with parameter r6).

During function Overcooling the defrost is never activated: if the defrost interval expires when the function is running, the defrost will be activated to the end of the function

2.12 Locking/unlocking the keyboard

To lock the keyboard:

- make sure no procedure is running
- press ♠ and ♠ 2 s: the display will show "Loc" 1 s.
- If the keyboard is locked, you will not be allowed to:
- turn on/off the instrument by hand
- show the temperature read by the second probe
- show the temperature read by the third probe
- activate the defrost by hand turn on/off the auxiliary output by hand
- activate/deactivate function Overcooling
- show the information on the HACCP alarms
- erase the HACCP alarms list
- modify the working setpoint with the procedure related in paragraph

4.1 (you also can modify the working setpoint through parameter SP). These operations provoke the visualization of the label "Loc" 1 s.

press 🚱 and 📵 2 s: the display will show "**UnL**" 1 s.

Silencing the buzzer

- make sure no procedure is running
- press a button (the first pressure of the button does not provoke its usual effect)

3 НАССР

3.1 Preliminary information

The instrument can store up to 2 HACCP alarms and supplies information on:

- the critical value
- the alarm duration (between 1 min and 99 h and 59 min, partial if the alarm is running).

	5,
CODE	KIND OF ALARM (AND CRITICAL VALUE)
AL	lower temperature alarm (the lowest temperature during a
	whatever alarm of this type)
AH	upper temperature alarm (the highest temperature during a
	whatever alarm of this type)

PAY ATTENTION:

- the instrument stores the lower temperature alarm and the upper temperature alarm on condition that the tem perature joined to the temperature alarm is the cabinet one (parameters A0 and A3 = 1) or the one read by the third probe, on condition that its function is the one of display probe (parameters A0 and A3 = 1 and parameter
- the instrument updates the information on the alarm or condition that the critical value of the new alarm is more critical than the one the instrument has stored or on con dition that the information has already been shown the alarm duration refers to the one that has provoked
- the update of the critical value if the instrument is turned off, it will store no alarm. When the cause that has provoked the alarm disappears, the display

make sure the keyboard is not locked and no procedure is running press 💫 2 s: the display will show the first available label

3.2 Showing the information on the alarms

- press 🔊 or 🦃 to select "**LS**"
- press the display will show one of the codes related in the chart of paragraph 3.1
- press 😝 or 📞 to select a code, for example "AH" To show the information on the alarm:
- press (1908) LED **HACCP** will stop flashing to remain lit up permanently
- and the display will show in succession (for example):

	8	the critical value is 8 °C/°F
	dur	the display is about to show the alarm duration
net	h 1	the alarm has lasted 1 h (to be continued)
	n15	the alarm has lasted 1 h and 15 min
if	AH	the code you had selected
	Each inform	mation lasts 1 s

To escape from the succession of information:

- press (★) the display will show the code you had selected. To quit the procedure:
- press (★) twice or do not operate 15 s.

3.3 Erasing the alarms list

- make sure the keyboard is not locked and no procedure is running
- press 😥 2 s: the display will show the first available label
- press or (5) to select "**rLS**"
- press (and
- press (37) or (52) in 15 s to set "149" • press (888) or do not operate 15 s: the display will show "----" flashing 4 s and LED HACCP will go out, after which the instru
 - ment will guit the procedure.

4 SETTINGS 4.1 Setting the working setpoint

- make sure the instrument is turned on, the keyboard is not locked and no procedure is runnina
- press (ask) LED 🚜 will flash
- press or in 15 s; also look at parameters r1, r2 and r3 ■ press (sat) or do not operate 15 s.
- You also can modify the working setpoint through parameter SP.

To gain access the procedure:

- make sure no procedure is running
- press and and s: the display will show "PA"
- press (3) or (5) in 15 s to set "-19"

4.2 Setting configuration parameters

- or do not operate 15 s
- press (and (4 s: the display will show "SP
- press 🐼 or 🐯

- press (or (in 15 s ■ press (80%) or do not operate 15 s.

To quit the procedure:

Switch off/on the power supply of the instrument after the modification of the parameters.

4.3 Restoring the default value of configuration parameters eters

To gain access the procedure make sure no procedure is running

press 🔊 and 🦭 4 s or do not operate 60 s.

- press (3) and (2) 4 s: the display will show "PA
- press (®
- press ♠ or ♠ in 15 s to set "**743**" ■ press (80%) or do not operate 15 s
- press and 4 s: the display will show "def
- press (acc
- press (3) or (5) in 15 s to set "149" ■ press (808) or do not operate 15 s: the display will show "**dEF**" flashing 4 s, after which the instrument will guit the procedure

Make sure the default value of the parameters is appropriate, in particular if the probes are PTC probes.

5 SIGNALS 5.1 Signals

- LED MEANING ₩ LFD compressor if it is lit, the compressor will be turned on if it flashes • the modification of the working setpoint will be running
- a comp. prot. will be running (parameters C0, C1 and C2) LED defrost if it is lit, the defrost will be running

if it flashes:

- the dripping will be running (parameter d7) LED cabinet light
- if it is lit, the cabinet light will be turned on

if parameter u1 has value 1 (or the user managed by the third output are the demisting resistances): it is lit, the demisting resistances will be turned on because

of the regulator (parameter b0) if it flashes, the demisting resistances will have been turned

on by hand (parameter b1) if parameter u1 has value 2 (or the user managed by the third output is the auxiliary output):

f it is lit, the aux. output will have been turned on by hand if it flashes, the auxiliary output will have been turned on at distance (parameter i5)

f it is lit, an alarm will be running f it is lit, function Overcooling will be running (parameters

r5 and r6) 0 LED Energy Saving if it is lit, function Energy Saving will be running (parameters

4 and i5) HACCP LED HACCE

LED alarm

Δ

if it is lit, the instrument will have stored one HACCP alarm at least and you will have already shown all the information on the alarms

if it flashes, the instrument will have stored one HACCP alarm. at least but you will not have shown all the information on

- °C LED Celsius degree if it is lit, the unit of measure of the temperatures will be Celsius degree (parameter P2) LED Fahrenheit degree if it is lit, the unit of measure of the temperatures will be Fahrenheit degree (parameter P2)
- Φ LED on/stand-by if it is lit, the instrument will be turned off CODE MEANING
- the keyboard and/or the working setpoint are locked (pa
- rameter r3); also look at paragraph 2.12 the quantity to show is not available (for example because

6 ALARMS 6.1 Alarms

CODE MEANING

the probe is not enabled)

- Lower temperature alarm (HACCP alarm) Remedies:
- check the temperature joined to the alarm
- look at parameters A0. A1 and A2
- has stored, if you have already shown the information on the alarm or if the instrument has stored no alarm, the

if the critical value is lower than the one the instrument

- instrument will store the alarm
- the alarm output will be turned on (if present) Upper temperature alarm (HACCP alarm)
- check the temperature joined to the alarm
- look at parameters A3, A4 and A5 • if the critical value is higher than the one the instrument
 - the alarm or if the instrument has stored no alarm, the instrument will store the alarm
- the alarm output will be turned on (if present Multipurpose input alarm (only if parameter P4 has value 3)
 - check the reasons that have provoked the activation of

has stored, if you have already shown the information on

- the input look at parameters i5 and i6
- Effects: • if parameter i5 has value 4, the alarm output will be turned
- if parameter i5 has value 5, the compressor will be turned off and the alarm output will be turned on (if present)
- iSd Instrument locked alarm (only if parameter P4 has value 3) Remedies:

check the reasons that have provoked the activation of

- the multipurpose input turn off/on the instrument or switch off/on its power sup
- Iook at parameters i5, i6, i7, i8 and i9

on (if present)

СОН

CSd

- the regulators will be turned off. • the alarm output will be turned on (if present) Overheated condenser alarm (only if parameter P4 has value

■ look at parameter C6

- check the condenser temperature
- the alarm output will be turned on (if present)
- Compressor locked alarm (only if parameter P4 has value 2)
- check the condenser temperature turn off/on the instrument: if the condenser temperature
- will have to disconnect the power supply and clean the
- look at parameter C7 Effects: the compressor will be turned off

is still above the one you have set with parameter C7, you

• the alarm output will be turned on (if present) When the cause that has provoked the alarm disappears, the instrument restores the normal operation, except for the instrument locked alarm (code "iSd") and the compressor locked alarm (code "CSd") that

need you turn off/on the instrument or switch off/on its power supply

7 INTERNAL DIAGNOSTICS 7.1 Internal diagnostics CODE MEANING

Pr1 Cabinet probe error emedies:

- look at parameter P0
- check the integrity of the probe
- check the connection instrument-probe check the cabinet temperature
- the compressor activity will depend on parameters C4 and
- the alarm output will be turned on lif present.

Pr2	Second probe error
	Remedies:
	• the same you saw in the previous case but related to
	second probe
	Effects:
	• the defrost will last the time you will have set with par
	eter d3

• if parameter d8 has value 2, the instrument will work as if

parameter had value 0 the alarm output will be turned on (if present) Third probe error (only if parameter P4 has value 1 or 2)

• the same you saw in the previous case but related to the third probe

Effects: • if parameter P4 has value 2, the overheated condenser alarm (code "COH") and the compressor locked alarm (code "CSd") will never be activated

• the alarm output will be turned on (if present) When the cause that has provoked the alarm disappears, the instrument restores the normal operation.

8 TECHNICAL DATA

8.1 Technical data

Box: self-extinguishing grey. Frontal protection: IP 65.

Connections: faston 6.3 mm (0.248 in) wide (power supply and outputs), screw terminal block (inputs), 5 poles connector (serial port); extractable terminal blocks or screw terminal blocks (power supply and outputs) by request.

Working temperature: from 0 to 55 $^{\circ}$ C (32 to 131 $^{\circ}$ F, 10 ... 90% of relative humidity without condensate).

Power supply: 230 Vac, 50/60 Hz, 3.5 VA; 115 Vac, 50/60 Hz, 3.5 VA by request.

Alarm buzzer: by request.

Measure inputs: 2 (cabinet probe and second probe configurable for evaporator probe or display probe) for PTC/NTC probes.

Digital inputs: third input configurable for measure input (display probe or condenser probe, for PTC/NTC probes) or digital input (multipurpose, free of voltage, 5 V 1 mA).

Working range: from -50 to 150 °C (-50 to 300 °F) for PTC probe, from -40 to 105 $^{\circ}$ C (-40 to 220 $^{\circ}$ F) for NTC probe.

Resolution: 0.1 °C/1 °C/1 °F. Relay outputs: 3 relays:

The maximum current allowed on the loads is 20 A.

Serial port: port for the communication with the supervision system (through a serial interface) or with the programming key (via TTL, with MODBUS communication protocoll

Further communication ports (by request): port for the communication with the supervision system (via RS 485, with MODBUS communication protocol), port for the communication with the remote indi-

LP	0	2		2	parity 0 = none 1 = odd 2 = even					
					1 = odd 2 = even					
(1)	the unit of measure depends on parameter P2									
(2)	set the parameters related to the regulators appropriately after the modification of the parameter									
(3)	the parameter also has effect after an interruption of power supply that arises when the instrument is turned on									
(4)	the	time you	have set v	vith the p	arameter is also counted when the instrument is turned off					
(5)	if parameter C1 has value 0, the delay since the end of the cabinet probe error will however be 2 min									

the differential of the parameter is 2 °C/4 °F

if (when you turn on the instrument) the condenser temperature is above the one you have set with parameter C7, parameter C8 will have

the instrument stores the count of the defrost interval every 30 min; the modification of parameter d0 has effect since the end of the previous defrost interval or since the activation of a defrost by hand

the display restores the normal operation as soon as the dripping ends and the cabinet temperature falls below the one that has locked the display (or if a temperature alarm arises)

if parameter P3 has value 0, the instrument will work as if parameter d8 had value 0

if parameter P4 has value 0 or 3, the instrument will work as if the parameter had value 0 (but it will not store the alarm)

if parameter P3 has value 0, the instrument will work as if parameter A0 had value 0 (but it will not store the alarm)

during the defrost and the dripping the temperature alarms are not enabled if parameter i5 has value 1, 2, 3, 6 or 7, the effect will not be signalled

make sure the time you have set with parameter i7 is shorter than the one you have set with parameter i9

to avoid damaging the connected user, modify the parameter when the instrument is turned off

if parameter u2 has value 0, when you turn off the instrument the cabinet light or the auxiliary output will also be turned off; next time you turn on the instrument the user will be turned off.
